

Introduction to AR Parrot drone with MiruMod

Aug. 26, 2022

The Silverlit XUFO came to the market in 2005.

At first glance a fantastic new concept!

However, the flying pleasure lasted only 10 minutes: Crash, Gyro broken!

The reason for the crash was the missing damping of the Gyro. The tiny ball bearings of the x,y suspension are originally filled with a thick grease (for damping!), disappear after mechanical use during flying!

A much better mechanical Gyro with damping by bending 3x and 2x 0.06 wires was designed by UFO doctor, 2005 to 2009, see Swiss Gyro

The Parrot AR Drone came to the market in 2008. Fine flying, but controlled by an iPhone!

Miru and UFO doctor designed a control by standard Remote Control

The original UFO doctor reports about the MiruMod can be downloaded here:

[MiruMod - AR.Drone v1.0 and v2.0 WiFi-less mod by miru](#)
